Purpose 1

Instructions 2

Purpose

This document will show you how to edit the Windows update download and install scheduler.

Instructions

To configure the behavior of Automatic Updates

1. In Group Policy Object Editor, expand **Computer Configuration**, expand **Administrative Templates**, expand **Windows Components**, and then click **Windows Update**.
2. In the details pane, click **Configure Automatic Updates**.
3. Click **Enabled** and select one of the following options:
 - **Notify for download and notify for install.** This option notifies a logged-on administrative user prior to the download and prior to the installation of the updates.
 - **Auto download and notify for install.** This option automatically begins downloading updates and then notifies a logged-on administrative user prior to installing the updates.
 - **Auto download and schedule the install.** If Automatic Updates is configured to perform a scheduled installation, you must also set the day and time for the recurring scheduled installation.
 - **Allow local admin to choose setting.** With this option, the local administrators are allowed to use Automatic Updates in Control Panel to select a configuration option of their choice. For example, they can choose their own scheduled installation time. Local administrators are not allowed to disable Automatic Updates.
4. Click **OK**.
